Unit ID#		D# 606	Facility ID# 37000					1	Pageof	
1.										
	b. c. d. e.	Aqueous wastes containing metals listed in Title 22, 0 pH adjustment or neutralization Precipitation or crystallization Phase separation by filtration, centrifugation, or gravity Ion exchange Reverse osmosis Metallic replacement			g. h. i. j. k.	Plating t Electrod Electrov	the metal onto lialysis. vinning or ele al stabilizatio tion.	o an elec	etrode.	
	b. c. d. e.	Aqueous wastes with total organic carbon less than 10% as measured by EPA Method 9060 and less than 1% total volatile organic compounds as measured by EPA Method 8240 may be treated by the following technologies: Phase separation by filtration, centrifugation or gravity settling, but excluding super critical fluid extraction. Adsorption. Distillation. Biological processes conducted in tanks or containers and utilizing naturally occurring microorganisms. Photodegradation using ultraviolet light, with or without the addition of hydrogen peroxide or ozone, provided the treatment is conducted in an enclosed system. Air stripping or steam stripping.								
	b. c.	Sludges, dusts, solid metal objects and metal workings which contain or are contaminated with metals listed in Title 22, CCR, Section 66261.24(a)(2) and/or fluoride salts may be treated by the following technologies: Chemical stabilization using silicates and/or cementitious types of reactions. Physical processes which change only the physical properties of the waste such as grinding, shredding, crushing, or compacting. Drying to remove water. Separation based on differences in physical properties such as size, magnetism or density.								
		Alum, gypsum, lime, sulfur or phosphate sludges may be treated by the following technologies: Chemical stabilization using silicates and/or cementitious types of reactions. Crying to remove water								
	b. c. d.	Wastes identified in Title 22, CCR, Section 66261.120 following technologies: Chemical stabilization using silicates and/or cementition Drying to remove water. Phase separation by filtration, centrifugation or gravity s Screening to separate components based on size. Separation based on differences in physical properties sure	as types of reactions.		men	s for sp	ecial waste o	elassifica	ation in Section 66261.122 may be treated by the	
7.		Wastes, except asbestos, which have been classified by the Department as special wastes pursuant to Title 22, CCR, Section 66261.124, may be treated by the following								
		technologies: Chemical stabilization using silicates and/or cementition Drying to remove water.	as types of reactions.				eparation by f c separation.		, centrifugation or gravity settling.	
8. □ a	a.	Inorganic acid or alkaline wastes may be treated by t pH adjustment or neutralization.	the following technology:							
		Soils contaminated with metals listed in Title 22, CCI technologies: Chemical stabilization using silicates and/or cementitious Screening to separate components based on size.		_			cumulative T	oxic Su	bstances) may be treated by the following	
	b. c. d. e.	Used oil, unrefined oil waste, mixed oil, oil mixed with water and oil/water separation sludges may be treated by the following technologies: Phase separation by filtration, centrifugation or gravity settling, but excluding super critical fluid extraction. Distillation. Neutralization Separation based on differences in physical properties such as size, magnetism or density. Reverse osmosis. Biological processes conducted in tanks or containers and utilizing naturally occurring microorganisms.								
		Containers of 110 gallons or less capacity which are not constructed of wood, paper, cardboard, fabric or any other similar absorptive material, which have been emptied as specified in Title 40 of the Code of Federal Regulations, Section 261.7 or inner liners removed from empty containers that once held hazardous waste or hazardous material and which are not excluded from regulation may be treated by the following technologies provided the treated containers and rinseate are managed in compliance with applicable requirements. Rinsing with a suitable liquid capable of dissolving or removing the hazardous constituents which the container held. Physical processes such as crushing, shredding, grinding or puncturing, that change only the physical properties of the container or inner liner, provided the container or inner liner is first rinsed and the rinseate is removed from the container or inner liner.								
	Multi-component resins may be treated by the following process: a. Mixing the resin components in accordance with the manufacturer's instructions.									
13. <i>A</i>	13. A waste stream technology combination certified by the Department pursuant to Section 25200.1.5 of the Health and Safety Code as appropriate for authorization under Permit by Rule.									
	Certified Technology Number									

Waste and Treatment Process Combinations

The Waste and Treatment Process Combinations pages list those waste and treatment combinations certified by DTSC pursuant to HSC Section 25200.1.5 for authorization under CE, CA, and PBR tiers. Each page is specific to a tier, with each tier specific page listing the wastes and treatment processes eligible under that tier. Note that some of the categories have volume or concentration restrictions that must be met in order to qualify for that tier. Additionally, some of the wastes refer to 22 CCR and others to the Health and Safety Code.

Complete one Waste and Treatment Process Combinations page for each unit, except CE-CL units.

(Note: the numbering of the instructions follows the data element numbers that are on the UPCF pages. These data element numbers are used for electronic submission and are the same as the numbering used in 27 CCR, Appendix C, the Business Section of the Unified Program Data Dictionary.)

Please number all pages of your submittal. This helps your CUPA or local agency identify whether the submittal is complete and if any pages are separated.

606. UNIT ID NUMBER-Enter the unit ID number (same as item 606 from the Onsite Hazardous Waste Treatment Notification-Unit page).

1. FACILITY ID NUMBER - Enter the 6 character Permit # on your Unified Program Facility Permit (UPFP). If you do not have a Unified Program Facility Permit, leave this blank.

627. WASTE AND TREATMENT PROCESS COMBINATIONS—CESQT 628. WASTE AND TREATMENT PROCESS COMBINATIONS—CESW 629. WASTE AND TREATMENT PROCESS COMBINATIONS—CA 630. WASTE AND TREATMENT PROCESS COMBINATIONS—PBR 631. WASTE AND TREATMENT PROCESS COMBINATIONS—CEL

Use the correct page for the unit. Check the waste and treatment process(es) that pertain to the unit. If the process is a technology certified by DTSC, please enter the Certified Technology Number (Cert. #). Certified technologies appropriate for authorization, and the eligible tiers, are listed below.

Note that reactive and extremely hazardous wastes are not allowed to be treated under any of the onsite treatment tiers, except for certain wastes under Conditionally Exempt–Specified Wastestreams.

CERTIFIED TECHNOLOGIES

DTSC is authorized to certify hazardous waste technologies. Appropriate certified technologies may be eligible for CE, CA or PBR onsite treatment tiers. As of April 1, 1999, there is one certified technology for these tiers. The certification is for aldehyde treatment processes and is eligible for the CESW tier. The approved technology is:

Neutralex SCIGEN

Cert. # 97-01-0024 333 East Gardena Blvd.

Gardena, CA 90248

Effective Date: June 29, 1997 (expires June 29, 2000)

Description: Batch treatment for 10 percent Formalin generated by medical, educational, and

laboratory facilities. Chemically treats in a provided 8-liter vessel. After testing, allows for

disposal to sanitary sewer.

Tier: Authorized for the CESW tier.

A copy of published Certification Statements and additional updates may be obtained by contacting DTSC at (916) 322-3670 or from the Cal/EPA on-line Bulletin Board via modem at (916) 322-5041.
